

ABOUT RESOURCE

ReSource is Australia's first and only alkaline and zinc carbon battery recycling company. Our Melbourne processing facility is designed to process these single use batteries which more than 80% of household batteries sold today.

Our process offers a safe and cost effective alternative to batteries being dumped in landfill whilst also avoiding environmentally harmful smelting overseas.

ReSource is expanding it's services in 2020 to include not only processing of single use batteries but also the ability to sort batteries using both mechanical and optical sorting equipment.

In addition, our existing processing plant is being upgraded to increase the capacity as well as improve upon the purity of the outputs for our end customers.

These new installations will ensure ReSource remains the most advance battery handling and processing company in the nation. Our processing capacity means we can process at least 20% of the nations single use batteries should collections reach that level.

ROLE IN BATTERY STEWARDSHIP

ReSource has had limited engagement with the battery stewardship push until very recently due to prioritising the technology to process batteries first and foremost.

Now this development is finalised, we are eager to offer our services to those looking for a true recycling service for single use batteries.

HISTORY

Founded in 2016, ReSource is a young company, however, being founded around the sole purpose to find a solution for single use batteries, much has been achieved in a short period of time.

COMMITMENT TO SUSTAINABILITY

The ReSource battery recycling process is revolutionary when compared to old smelting methods. Our process uses around 1/25th of the energy, recovers over 80% of batteries (vs. less than 40%), and produces no harmful emissions. In addition, our outputs result in the recovery of almost all valuable minerals inside the batteries.

With less than 4% of Australia's household batteries currently being recycled, our innovative battery recycling process is a real solution to a real problem.

WHY DOES RESOURCE VALUE BEING AN ABRI MEMBER?

As a pioneer of single use battery recycling in Australia, ReSource is committed to ensuring an increase in battery recycling rates nationally. ABRI acts as a pivotal central voice for the industry in working to the same goal hence it only makes sense to support the work being done as a collective body.
